

PostScripting Instructions for One-Color Work

QuarkXPress 3

Setting and Preferences

Use these instructions to write PostScript from QuarkXPress. You will then be able to create PDFs from the PostScript by using Acrobat Distiller.

Separate instructions are available on the maple-vail.com web site for distilling PDF files.

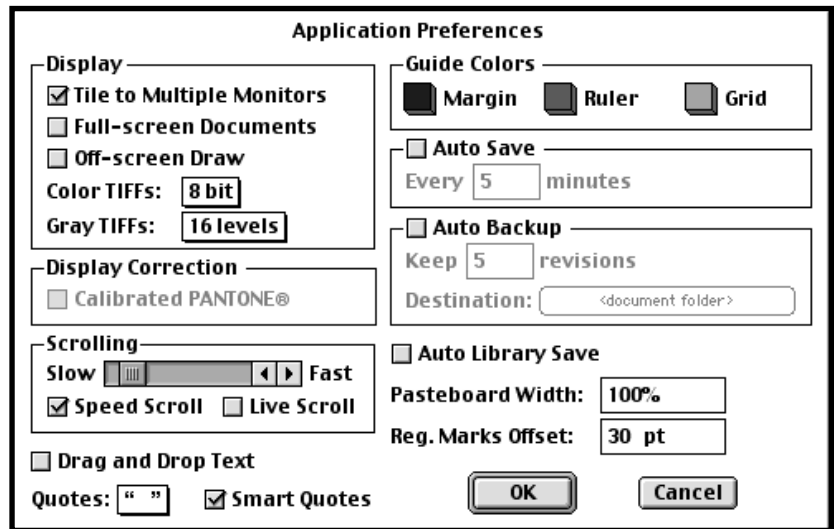

Due to the age of QuarkXpress 3.32, it is less compatible with our workflow. We therefore recommend the use of QuarkXpress 4.1 or greater. Problem areas have been experienced in the use of custom colorized TIFF files, grayscale TIFFs on custom color backgrounds and gradients that use custom colors.

Application Preferences:

- Reg. Marks Offset: Between 12 and 30 pt

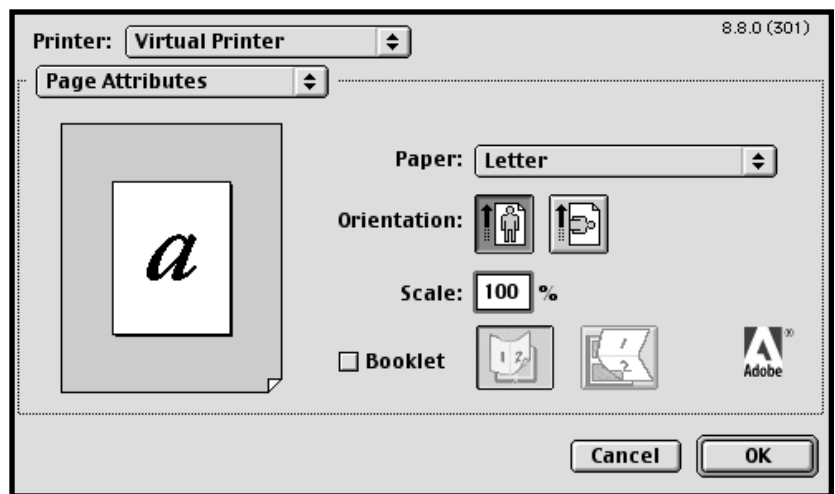

(To ensure that registration marks will not print in the live area, we recommend 30 points)

Page Attributes:

Choose *Page Attributes* from Pulldown Menu
